GLYPHOSATE NSRL PUBLIC COMMENTS

I am requesting that the Office of Environmental Health Hazard Assessment (OEHHA) to **VOTE NO** on the proposed adoption of a No Significant Risk Level (NSRL) of 1100 micrograms per day for the chemical glyphosate to be adopted into regulation in Title 27, California Code of Regulations, section 25705. This proposed exemption fails to consider significant long-term cumulative environmental impacts to humans, wildlife, beneficial fungi and beneficial bacteria through water, soil and plant absorption and contamination. No level of glyphosate is necessary for land management. There is a wide spectrum of non-toxic alternatives that can easily be incorporated into daily land management practices. There are significant environmental impacts on a global scale from the extraction and processing of yellow phosphorous and other components in the production of Glyphosate.
